

Sharing educational experiences: an ICMI perspective.

ARTIGUE, MICHELLE.

From its creation in 1908, the International Commission on Mathematical Instruction (ICMI) has had as an essential ambition: to foster international exchanges and cooperation in mathematics education. In this contribution, I will draw on the lessons from this experience.

Considering the theme of this conference, I will especially rely on the recent ICMI Study which has compared mathematics educational cultures in Asiatic countries in the Confucian tradition and in countries from the West.
